

Dear Arnold's Service Company, Inc. Customer:  
 Thanks so much for purchasing the **BRYANT** condenser fan motor. Please make sure your power is turned off before installing the motor. I do not want anyone to get shocked or hurt. This motor should be able to be wired using your existing dual capacitor. Please make sure that the dual capacitor that you are using is rated 5, 370 volts on the fan terminal hook up. You can use the new capacitor that I sent you if your existing capacitor is bad. You will need to make some wiring changes if you are going to use the new capacitor. Below I have a diagram of the changes you will need to make if you want to use the new capacitor. Thanks so much for your business. Best of luck with the installation. Hope you have a great day! God bless you and your family. *BRYANT*  
 Sincerely, Steve Arnold, arnoldservice.com

USE THIS DIAGRAM IF YOU NEED TO USE THE NEW CAPACITOR SUPPLIED WITH THIS MOTOR.
